## Keep Your Floor-Plan Options (Partially) Open

No issue generates more discussion in our industry than the architectural Pandora's box: an open floor plan.

In cities like Philadelphia, the workforce now skews younger; millennials tend to favor collaborative work environments. An open floor plan doesn't intimidate them—they're used to team cultures from their college years onward.

However, wide-open spaces aren't necessarily productive ones for an older generation that cherishes the privacy of four solid walls and a door. Per a [2017 Forbes Coaches' Council blog post](#), the pros and cons of an open floor plan are subjectively debatable.

### It can simultaneously:

- **Disrupt deep work**
- **Offer a 360-degree viewpoint**
- **Drain introverts**
- **Foster inclusion and communication**

An approach to open floor plans coincides with a crucial point in the article: **it depends on your culture and line of work**. If your company encourages constant collaboration as part of the workflow process, a **hybrid** open floor plan is a good idea. That's because: you'll still need secure spaces for confidential meetings. (We've NEVER seen a completely open floor plan!) **Industries most conducive to a modified open floor plan include:**

- **Creative-design or engineering firms**
- **Light-industrial production and staff assembly**
- **Product engineering and fabrication**
- **Small offices with tight spaces**
- **Technology start-ups**

The practical benefits of an open floor plan:

- 1) Reduced wall, door, and partition costs
- 2) Lighting can be an open grid
- 3) Day lighting can flood the space better
- 4) Both fire suppression and HVAC design are easier
- 5) More people can occupy a less dense floor plan.

Whether you're a light-industrial manufacturer in need of collaborative design-fabrication space or a business suffocating from "we're all walls" syndrome, A Corporate or industrial architectural firm can reformulate the ideal layout. To discuss opening up your workplace, please contact us at either 856-547-6414 or [lee@oneanchor.com](mailto:lee@oneanchor.com). [Anchor Point Architecture, Inc.](#)
